DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-12 and 27-26, drawn to a door latch assembly, classified in class 292, subclass 229.
- II. Claims 13, 15-18, 20-25, and 28, drawn to a resilient assembly, classified in class 267, subclass 69.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the resilient assembly within the combination is void of a recess, a first additional seat, a first projection, and a first additional projection in the first retainer, and the resilient member is received by the recess, wherein the resilient member is mounted between the first seat and the first additional seat and the resilient member is mounted on the first projection and the first additional projection, and where in the first retainer surrounds the resilient member. The subcombination has separate utility such as a movement attenuator device that is for use in a vehicle headlamp leveling system.

Art Unit: 3676

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
